

We've heard that public libraries are rethinking how they provide much-needed access to technology as they reopen. With the challenge of social-distancing in their current computer labs, many libraries are lending out devices to their patrons. Tech Tub has been a flexible solution for managing devices in school libraries and can do the same for public ones too!

1 Store and charge devices in between rentals

Many libraries have secured grants for device purchases and need a way to store and charge them so they're ready to go when they are loaned out to patrons. Tech Tubs are an affordable way to secure and manage devices and can be purchased individually at the same pace as devices are.

2 Curbside pickup

Schools that are already using Tech Tubs to manage their devices saw how flexible they were during device deployments for remote learning. Whether it was a drive-thru setup or scheduled times for curbside pick up, the mobility of Tech Tub made it easier. A library can do the same when lending out their technology.

3 Accessibility to technology – special delivery!

Some libraries may opt to deliver devices to patrons' homes to provide accessibility to everyone in their community. Tech Tubs are lightweight and fit in a front seat, so they are ready for any road trip!

Lock. Charge. Go.
Tech Tubs and Trolleys hold 6 or 10 devices.
